## PRODUCTS

### COURIER BAGS AND ENVELOPES

Courier bags and envelopes made of one-layer or multi-layer film LDPE and MDPE resistant to tearing and punching. They are available in many different sizes according to customer demands. Available closure - hot melt permanent (possibility to make double glue lines). The perforation or tear off strip for easy opening can be added optionally. Printing available up to 8 colours. Additionally envelopes can be provided with bottom fold, pouch for packing list, QR codes, individual numeration and paper labels.

### AIR-BUBBLE ENVELOPES

Waterproof air-bubble mailing bags made of 100% PE film. The product can be fully recycled. Our air-bubble envelopes are available in 5 different sizes with individual static barcodes dedicated for certain size. The product can be designed accordingly individual customer demand (size, print up to 8 colors).

## SECURITY BAGS AND ENVELOPES

Security bags and envelopes are used to protect valuables from unauthorised opening without leaving visible signs. It is mainly used for heavy objects transportation, such as coins. Additional handle makes them very convenient in everyday use. Security bags and envelopes are designed according to customers individual requirements or available as PLASTSAFE standards. Additionally they can be provided with perforation, vents, pouch for documents, paper labels and bubble film inside. According to a report prepared by German testing institute ISEGA GmbH, use of the above mentioned features ensures highest level of safety for deliveries and deposits.

### BAGS

Plast-Farb offers different kinds of bags made of polyethylene (LDPE, HDPE, MDPE), as well as oxo-degradable and biodegradable films. Available in different sizes as well as different film thickness. We have possibility to produce bags from transparent and coloured film. Furthermore bags can be made with or without a bottom fold, with or without reinforcement. Additionally bags can be laminated or made with mat or glossy varnish.

## BIODEGRADABLE PACKAGING

Biodegradable packages are a range of products made of raw material consistent with eco-development rules. They are harmless to the environment as well as meet the agricultural and industrial requirements. They guarantee substantial reduction of greenhouse gasses emission as well as energy and non-renewable sources usage. Biodegradable raw material is a solution for the demand for environment friendly packaging. Plast-Farb certificate OK Compost guarantees that the DIN EN 13432:2000 standard is fulfilled, which means that the packaging can be recycled through organic recovery.

## SECURITY SEAL TAPE

Security seal tape (tamper evident sealing tape) is a product made of film covered with anti-adhesive silicone layer on one side and glue on the other. Due to that it can be wound on a roll as standard packaging tape. It is used to seal different kind of packages with valuable and confidential content in a way that every attempt of opening them causes visible and permanent marks. It is possible to personalize the tape with an individual print.
